

# RESITE Recorder Express

## Focus on the Application, not the Documentation

### What is Recorder Express?

Recorder Express is the light version of our RESITE Recorder. Designed for developers in need of fast documentation, Recorder Express resides right on your desktop, and with a click of a button, records your actions. When you are finished, Express simply exports content to Microsoft Word or XML.

Rapidly create end-user documentation and dramatically reduce the effort to create compiled help with RESITE Recorder Express.

### Eliminate manual creation of step-based text

Recorder Express can capture almost any Windows or web application, including text input, icons, and screen elements, eliminating the tedious efforts associated with constantly compiling your work.

### Enforce standardization across multiple developers

Recorder Express comes loaded with templates and features that make your work consistent in look and feel. Our affordable pricing means that you will not spend a fortune in time or money. Learning the tool takes less than a day, and will save you nearly 80% in the time it once took to manually produce consistent documentation.

### Edit your content on-the-fly, right in your recording

Express files can be stored and edited without having to leave the program. Seamlessly move from the Preview Window of the tool to the Content Editor. This means that once you've made your changes, you are now free to output into Microsoft Word or XML, but still reuse your file again and again.

### Try Recorder Express FREE for 30 Days

Visit [www.insiteobjects.com](http://www.insiteobjects.com) to download a free trial of the Recorder Express software. We invite you to see for yourself how easy it is to make quick, consistent documentation.

# How does Recorder Express work?

Why cut, paste, and type when you can record? RESITE Recorder Express allows you to automatically generate step-by-step documentation, just by performing the task.

## System Requirements:

### Minimum:

- Microsoft Windows 2000 Operating System
- 500 MHz Pentium III Processor
- 512 MB Memory
- 1024x768 pixel Display
- 16-bits per pixel Color

**Step One:**  
Start and navigate your application as normal.

**Step Two:**  
Use Resite Recorder Express to capture the action.

Recorder Express captures what you do in an application and automatically generates clear, step-by-step instructions.

**Step Three:**  
Export your content to Microsoft Word or straight to XML.

*Step-based content easily exports to 3rd-party help authoring tools.*

*Templates are included for producing end-user help documents.*

**Reduce the burden; increase the return, all with one simple tool.**  
*To sign up for your free 30-day trial, visit [www.insiteobjects.com](http://www.insiteobjects.com).*
