

RESITE Performance Suite

Orchestrate Excellence

What makes up the RESITE Performance Suite?

You can create your own 'Performance Package' using the following tools:

- Integrated Recorder, Publisher, & Tracker+
- SP
- LCMS
- Monitor

Our Recorder is available as a standalone product.

We recommend a base purchase of the integrated Recorder, Publisher, and Tracker+ for install or hosting (Sitelab) purchase. This will give you the flexibility to add on new products as they are developed with reduced impact on installation and training time.

Create a business cycle that constantly improves Employee Performance. RESITE Performance Suite allows you to Train, Support and Monitor your employee's performance using real metrics and historical facts rather than projections and estimates.

Integration of Recording, Publishing, Document Management and Website Management into a single interface

We've taken our three most popular products and combined them into a single interface. You can now simplify the content creation, importation, approval, and publication process just by clicking on the Manage Folders button found in the RESITE Recorder menu.

Wizard makes it easy to set up web help

Need a web support site quickly? Our new Publisher set-up can have you up and running in less than 20 minutes. We start you off with a standard production folder structure, which all your authors connect to, eliminating the problems associated with shared directories in multi-authoring environments.

Content is now more in sync

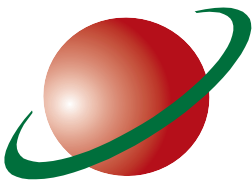

File saving and information sharing has been taken to a new level with in sync metadata and browse and import features. When you capture content in RESITE Recorder, your saved file will capture base metadata automatically. Importing files? Simply click the import files button and you can select and bring in any file type. Included with this feature is the ability to attach and associate metadata, just like a RESITE Recording, meaning you can associate any content with items such as an SAP Tcode.

Full-featured Employee Performance Support System (EPSS)

Our web help is now even more refined with a more detailed interface and IIS and Index Server integration. Navigation takes on a new level with tab features, quick menus, and breadcrumb history trails. Search features are more refined breaking into text, metadata, titles, and type. Our site is based in CSS design giving you unlimited flexibility in design choice customization and the power to put together the best online help system for your end users.

Track your content

Our web help wizard can easily create a folder structure and approval process system in minutes. Authors simply move content into a Staging folder, which then alerts your chosen Approvers via email to allow or deny the publishing of created content. Want to know who has touched which documents? History reports are associated with each file you create or import, letting you know what revisions or additions have been made.

How does RESITE Performance Suite work?

System Requirements:

Minimum:

- Microsoft Windows 2000 Operating System
 - 500 MHz Pentium III Processor
 - 512 MB Memory
 - 1024x768 pixel Display
 - 16-bits per pixel Color
- Disk Space:
- Installation - 50 MB
 - Working Space - 50 MB (A typical 10 page RESITE document with screen captures is about 1MB.)
- Microsoft Internet Explorer 6.x

Recommended:

- Microsoft Windows XP Operating System
 - 2.0 Ghz Pentium IV Processor
 - 1.0 GB or Greater Memory
 - 1280x1024 pixel Display
 - 32-bits per pixel Color
- Disk Space:
- Installation - 50 MB
 - Working Space - 500 MB (A typical 10 page RESITE document with screen captures is about 1MB.)
- Microsoft Internet Explorer 6.x
