

RESITE Recorder

Create Reusable Content

Quickly and consistently capture and document virtually any software application. With RESITE Recorder all keystrokes, mouse clicks, and screen shots are captured, then stored, in a single source file. Enhance and output your materials with a host of features that brings your training and support to the next level.

Do more. Add RESITE Publisher to your Recorder purchase for centralized document distribution.

Take your documentation to the next level by adding the Publisher module with your Recorder purchase. Not only does Recorder now completely integrate with Publisher, Publisher also easily converts all Recorder output into a powerful EPSS system, and links content-sensitive help right into SAP. Plus, with the Publisher module you also gain instant upload access to the RESITE SP, Monitor and LCMS modules.

Record any SAP, web or Windows application

With a versatile, easy-to-use interface, Recorder makes documentation simple. Whether recording SAP, Java, Business One, Microsoft Office, or an application you create, Recorder captures all text input, icons, and screen elements, eliminating the tedious efforts associated with constantly compiling your work.

Simplify editing with our single source technology

Recorder files can be stored and edited without having to leave the program. Seamlessly move from the Preview Window of the tool to the fully-featured Content Editor. This means that once you've made your changes, you are now free to output into multiple document formats and simulation mode, allowing you to reuse your file again and again.

Versatile language capabilities

Global? Recorder adapts to and can be utilized in multiple languages including: Arabic, Dutch, French, German, Italian, Spanish, Polish, Portuguese, Simplified Chinese, Japanese, Danish, and Swedish.

Total Integration with RESITE Publisher

Our latest Recorder is now completely integrated with RESITE Publisher, making it even easier to push documents out to your end users. Access is made directly through the 'File' drop down at the top of the tool, which then opens up the File Management folder. From there you can add, edit, or publish all of your content.

Top five reasons to choose RESITE Recorder:

Unmatched recording and language support

Recorder enhancements mean quick capture of all your step elements. Web, Java, SAP, Windows, Citrix, and Terminal environments are all supported with this tool. Languages can be added with ease. We also offer a host of customization packages for those who want more outside our standard options.

Offers both a driver and driver-less recording engine

Eliminate the conflicts between display drivers and remote-control applications with our driver-less engine. Or, take control of our flagship Recorder, with updated driver features.

Customizable Notes

Add notes to simulations, and customize placement, type, and how they appear. We give the flexibility to you, so you can get the right information to your users right away.

Pre-packaged libraries help speed up the editing process

Recorder makes as many items as reusable as possible, cutting hours off editing time. Store events in our Events Library, or utilize the Snippets Library to create and store often used text, notes, or comments.

Multiple output formats

Recorder comes standard with PowerPoint, Word, and XML output. We've created and included standard templates for BPP, End User, Configuration, Exercise, and Test just to name a few. Add simulation for more enhancement to your content, or take on a template customization package to create the output you need.

System Requirements:

Minimum:

- Microsoft Windows 2000 Operating System
- 500 MHz Pentium III Processor
- 512 MB Memory
- 1024x768 pixel Display
- 16-bits per pixel Color

Disk Space:

- Installation - 50 MB
- Working Space - 50 MB (A typical 10 page RESITE document with screen captures is about 1MB.)
- Microsoft Internet Explorer 6.x

Recommended:

- Microsoft Windows XP Operating System

- 2.0 Ghz Pentium IV Processor
- 1.0 GB or Greater Memory
- 1280x1024 pixel Display
- 32-bits per pixel Color

Disk Space:

- Installation - 50 MB
- Working Space - 500 MB (A typical 10 page RESITE document with screen captures is about 1MB.)
- Microsoft Internet Explorer 6.x

Tool Bar

Open, start, save, and edit your recordings with the simplified tool bar. Easy to find features get you up and running quickly.

Events Window

See your steps as you record them. Know where your screen changes occur, and quickly move your steps into the order you desire.

Preview Window

Get a quick glance at how the steps are being captured and what they would look like in most output formats.

Actions Window

Change or add more information to each step here. The Actions Window makes it easy to quickly unify your step look and feel.

Events & Metadata

Easily change back and forth between Metadata and the Events tab features.
