

Sitelab

On demand training and support

Sitelab provides direct web access to a comprehensive suite of authoring tools that allow you to develop and deliver high quality training and support, worldwide.

Sitelab uses the web to distribute information and help. Included with Sitelab is access to components in the RESITE Performance Suite, including:

- RESITE Recorder
- RESITE Publisher
- RESITE SP
- RESITE LCMS
- RESITE Tracker

Get started immediately.

Because Sitelab does not require that you install and maintain any server-side software components, your authoring team can begin using the tools right away. Online training courses make it easy to get up and running quickly.

Access a full suite of content authoring tools

With Sitelab, you get unlimited access to the RESITE Performance Suite. With these tools your authors can quickly create job aids, simulations, online help, process flows, lessons, exercises, and other useful materials.

Centralize the distribution of all your training and support

In addition to helping you create new training and support content, Sitelab also provides support for publishing your pre-existing content, allowing you to link users directly to the documents and simulations they need. Now, users don't have to look anymore, because you've brought training and support directly to them.

Eliminate up-front costs

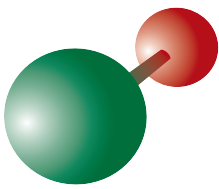

Get the latest suite of software tools for authoring world-class training and support materials without the burden of a large, up-front, enterprise software purchase. Sitelab offers cost-effective price packages, as well as an a la carte system, to fit the needs of any size business or group.

Provide global access to all your training and support content

Secure content is available to any of your internet users, worldwide. Sitelab can help diversify your materials across sites, countries, or languages, all while maintaining your company standards.

Manage your content, not your servers

With Sitelab, you eliminate server and network infrastructure problems and upgrade costs. By hosting your content online, you reduce administrative burden all while maintaining quality, secure material creation and distribution.

Sitelab harnesses the key features of these RESITE Performance Suite products:

How it all works:

Subscribers have unlimited access to both Recorder and SP. There is no limit to the number of each you wish to download!

Record content, then save recordings to your private Publisher site.

Publish all the content you want, paying only for what you decide to store.

Use LCMS to create online training courses and deliver them to your end users.

End users use RESITE SP to access all of their training and support content.

Sitelab only charges you for what you use! No more, no less.

RESITE Recorder

Quickly and consistently capture and document virtually any software application. With RESITE Recorder all keystrokes, mouse clicks, and screen shots are captured, then stored, in a single source file. Enhance your recordings with notes, definitions, and other useful content. Then, output your file into a broad base of material, including job aids, simulations, and help documents.

RESITE Publisher

Automate the delivery of training and support material to your end-users. RESITE Publisher takes content from different sources and integrates it into a single, automatically generated EPSS System. With this robust content creation and publication process, your company can apply documentation standards worldwide.

RESITE LCMS

Build and deliver dynamic online training courses. With RESITE LCMS, you link the end users to their roles, automating course delivery. Enhance instruction with the built-in studio tools to create reusable questions, quizzes and assessments.

RESITE Tracker

Define, enforce, and audit your process for creating and publishing content. RESITE Tracker controls the movement of any document to production. The status of documents are monitored as they move through the process, allowing companies version approval and control.

RESITE SP

Deliver context-sensitive help for any Windows or web-based application. RESITE SP monitors the current application and returns a listing of support relevant to the user at that time. Users can access help whenever they need it, without any searching, making it possible to bring help directly to your end user.
